ApnoAI Final Project — Data Analytics Track

==========

Title: ApnoMart Q2 2026 — Strategic Insights
Analyst: Mounika Nallamothu
Date: 28 October 2026
Tool Used: Power BI

INSIGHT 1: Revenue Pattern

Furniture generated the highest sales at 3.52M (21.63% of total sales). Office Supplies followed with 3.38M, while Electronics recorded the lowest sales at 2.96M.

So What: Furniture is ApnoMart's leading revenue category. The business should maintain its performance while exploring ways to increase Electronics sales.

INSIGHT 2: Profitability Pattern

Office Supplies generated the highest category profit at 1,176,657.32, with a profit margin of 34.80%. Electronics generated 558,395.07 in profit and had the lowest category profit margin at 18.88%. Electronics also had a higher average discount (14.06%) than Office Supplies.

So What: Electronics' lower profit margin makes its pricing, discounting, and costs worth reviewing. ApnoMart should investigate ways to improve Electronics profitability while learning from the stronger performance of Office Supplies.

INSIGHT 3: Customer Behavior Pattern

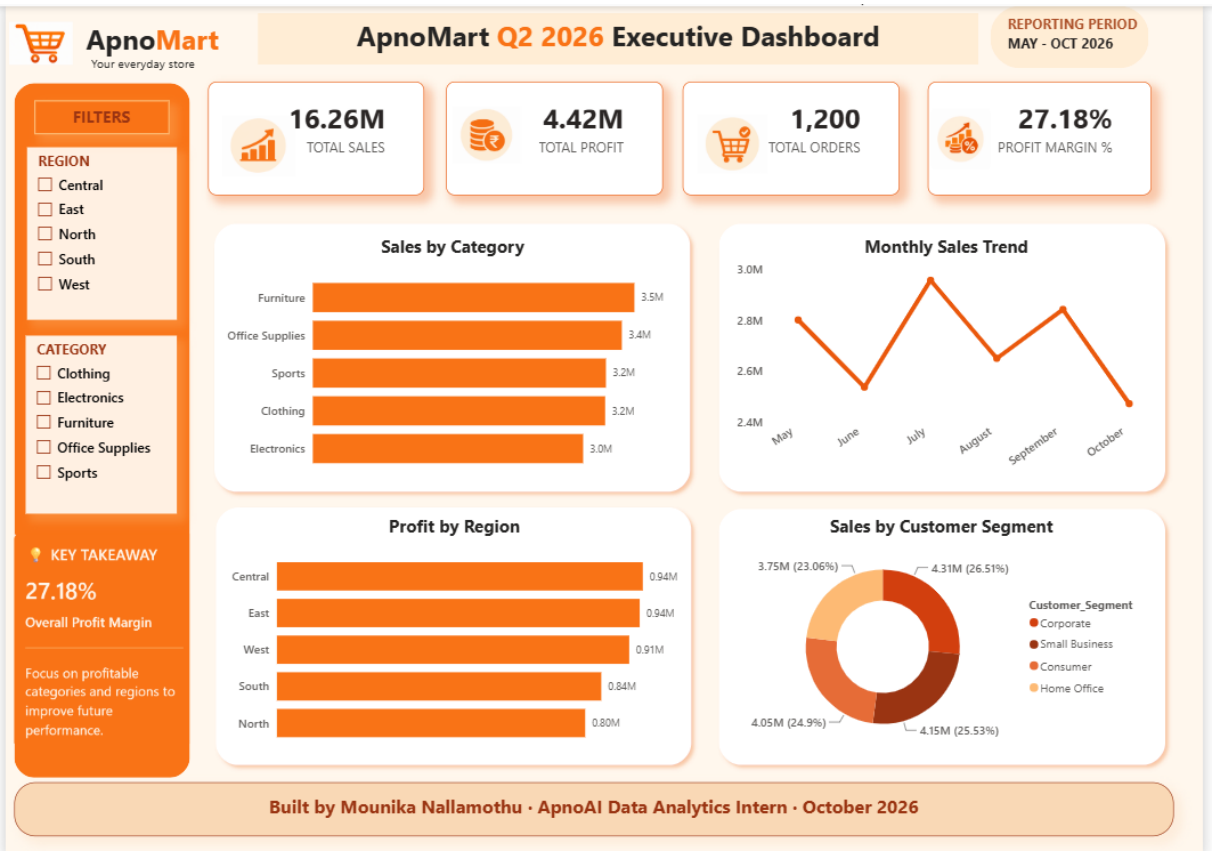

The Corporate segment contributed the highest sales at 4.31M (26.51% of total sales) across 307 orders. Home Office contributed approximately 3.75M (23.06%). Cash was the largest payment method by sales, contributing approximately 3.57M (21.98%), although no single payment method accounted for more than a quarter of total sales.

So What: Corporate customers represent the largest customer segment, but sales are relatively balanced across segments and payment methods. ApnoMart should test targeted retention and repeat-purchase offers for Corporate customers while continuing to support different payment preferences.

STRATEGIC RECOMMENDATION

For next quarter, prioritize profitable growth by reviewing Electronics pricing, discounts, and costs while using Office Supplies as a benchmark for stronger category profitability. Track sales and profit margins together when adjusting discount policies to improve profitability without unnecessarily reducing revenue.
